

International clinical distribution

Worldwide IMP distribution for clinical trials is complex. Hand it over to ONE worldwide network specialist coordinator.

Creapharm has developed an international distribution network.

Creapharm through its own coordinated network of local qualified specialists can handle:

- Local Importations : authorizations from health authorities with local CRO collaboration,
- Customs clearance through local brokers,
- Local secured storage at monitored temperature conditions (also for controlled drugs),
- Quick picking of orders and efficient transportation through selected and monitored carriers,
- Full traceability of stocks and transactions,
- Expiry date relabeling,
- Returns management : collection/reconciliation,
- Destruction.

Over 5 continents

Creapharm's network of partners covers all 5 continents (please visit our website to check the map of our international depots network).

Creapharm's coordination offers quality, timing and costs advantages :

- Network already set-up : easy study set-up & easy depots management
- Negotiated depots' prices
- Time savings at each step : project set-up, transfers from hub to depots, shipments from local depots to sites, local returns management and reconciliation, local destruction
- Follow-up of depots' activities
- Management of main bulk stocks available for several studies for different depots and countries
- Creapharm's quality insurance : Audit and Quality Agreement of depots
- Only ONE contact, ONE contract and ONE monthly invoice

Successful quality service

"Creapharm has met our expectations (delay, quality, prices). The necessary resources have been rightly put in place. Through their commitment, the complex distribution of two of our international studies is now successfully underway and Creapharm is in a position to be one of our "main suppliers".
ACTELION

Creapharm : a 15 years track record in supply chain management of IMP.
